

Coral pellets

General information

This off-the-shelf coral food makes feeding your corals so much easier and efficient. Their soft semi-moist pellet structure ensures an optimal acceptance and digestion. Besides that the pellets are packed with selected molecules to trigger feeding response. Comes in two pellet sizes. The small pellets (+/- 2.5mm) are developed for Ricordea and smaller LPS corals (such as Acanthastrea, Blastomussa, Lobophyllia,...). They consist of small fresh planktonic prey items like copepods. For larger LPS corals we formulated a diet with larger planktonic prey items like krill. These pellets are around 6mm, perfect for corals like Scolymia, Lobophyllia, Trachyphyllia, Duncanopsammia and Catalaphyllia. Feed your corals every other day. To avoid overfeeding, feed maximum 30% of the polyps in a coral colony. Store at room temperature. After opening, it is advised to store in the fridge (4 - 6°C) for prolonged preservation. Please avoid to leak moisture into the package during use.

Ingrediënts

Marine copepods, fish fillets, krill, wheat flour, wheat gluten, squid, adult brine shrimp, mineral salts, marine fish eggs, yeast, mussels, vitamins (retinyl acetate (vitamin A), cholecalciferol (vitamin D3), L-ascorbic acid phosphate (vitamin C), tocopherol acetate (vitamin E), menadione (vitamin K3), thiamine mononitrate (vitamin B1), riboflavin (vitamin B2), pyridoxine (vitamin B6), cyanocobalamin (vitamin B12), biotin (vitamin H), panthotenic acid (vitamin B5), folic acid (vitamin B9), niacin (vitamin B3)), antioxidants.
